# PL6 2-in-1 Wireless CarPlay & Android Auto Adapter - USB-A and USB-C Plug
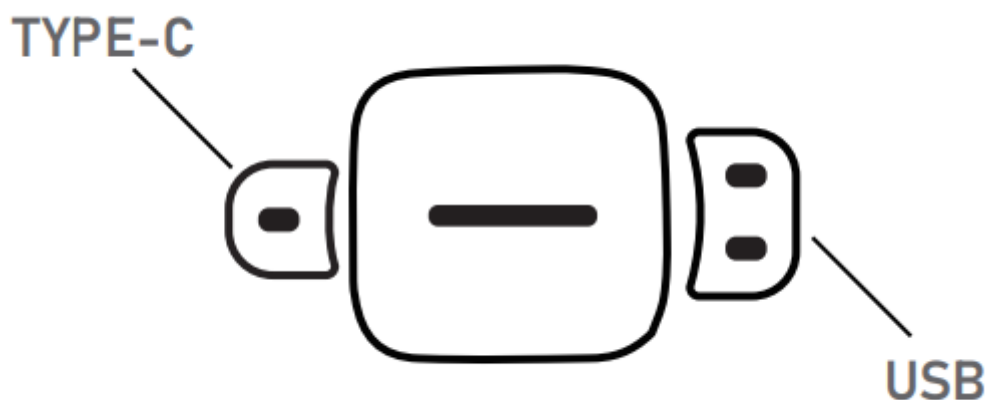

# Introduction

The Wireless CarPlay Adapter converts factory-installed wired CarPlay into wireless CarPlay, seamlessly linking your iPhone to your vehicle. Enjoy music, navigation, and other CarPlay features wirelessly—just plug it in and continue using your car's original controls. This wireless connection enhances driving enjoyment while reducing the need to handle your iPhone. To check if your vehicle supports CarPlay, you can scan the QR code below to get the information you need in the webpage.

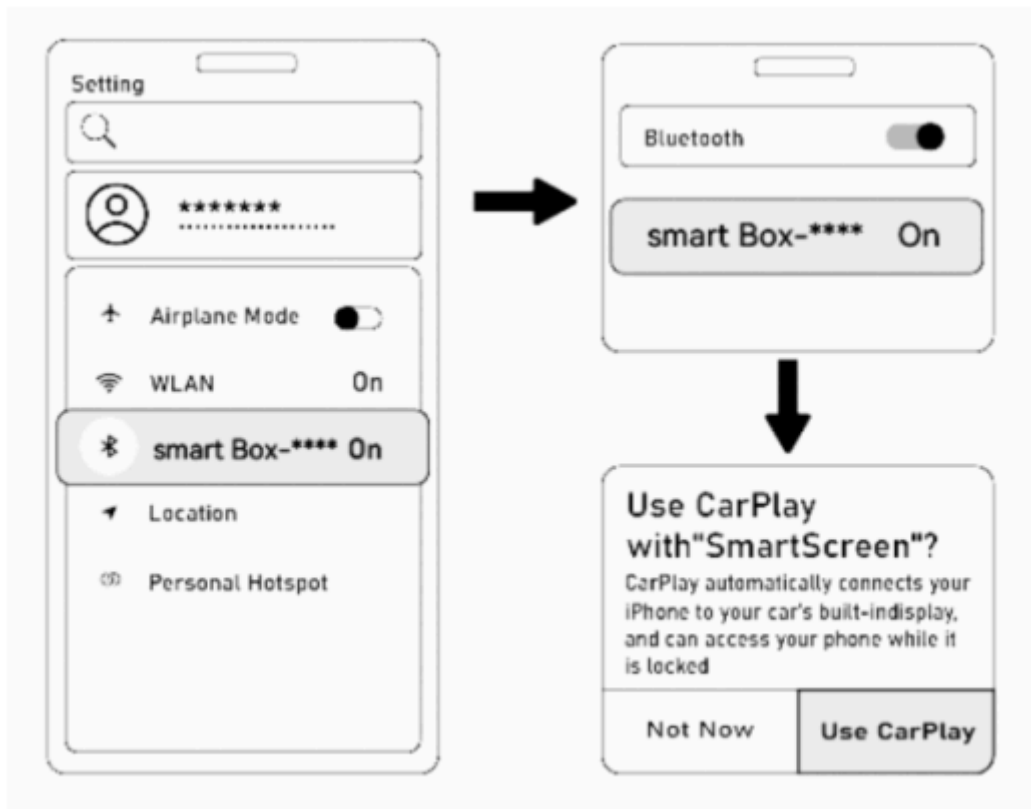

## Product overview

TYPE-C

USB

# Installation & Pairing

1. Connect the adapter
   Plug the wireless CarPlay adapter into the car's multimedia USB/data port using the supplied cable.

2. Enable connectivity on your iPhone
   Turn on Wi-Fi, Bluetooth, and make sure CarPlay is enabled ( *Settings › General › CarPlay* ).

3. Pair via Bluetooth
   Open Settings › Bluetooth on your iPhone.
   In the device list, tap "SmartBox-***.
   Confirm the pairing request. The adapter will connect automatically once pairing is complete.

4. Start using WirelessCarPlay
When pairing completes, WirelessCarPlay launches automatically—enjoy hands-free music, navigation, and calls.

5. Automatic reconnection
After the adapter has been connected once, it will reconnect each time you start the car, provided that Wi-Fi and Bluetooth remain enabled on your iPhone

# Firmware Update

1. Connect to the adapter's Wi-Fi hotspot
   - On your iPhone, open Settings › Wi-Fi.
   - Select the network that appears as SmartBox-* (or similar).
   - Enter the password 88888888 and tap Join.

2. Open the update page
   - Launch Safari and enter 192.168.1.101 in the address bar.
   - Tap "Firmware Upgrade" and wait a few minutes while the update installs.

3. Reconnect the adapter
   - When the progress bar reaches 100 %, unplug the adapter from the car's USB/data port, wait a few seconds, and plug it back in.
   - *Tip:* On your iPhone, go to Settings › Bluetooth, tap the ⓘ next to the previous "SmartBox-***" connection, choose Forget This Device, and then pair again.

# Compatibility Requirements

- iPhone: Model 6 or newer running iOS 10 or later.
- Vehicle: Factory-installed wired CarPlay (check supported models at Apple's website

# Frequently Asked Questions

1. The indicator light stays on after the car is turned off
   The adapter has no internal battery. The LED turns off only when the vehicle's USB/data port powers down, and the shut-off time varies by vehicle.

2. Cannot connect to CarPlay
   - Ensure Wi-Fi, Bluetooth, and CarPlay are all enabled on your iPhone.
   - Confirm the car's multimedia system supports wired CarPlay.
   - Check that the adapter's status LED is lit.
   - Verify the adapter is firmly plugged into the vehicle's USB/data port.

3. Can I pair more than one iPhone?
   Yes. To switch phones, first turn off Wi-Fi and Bluetooth on the previously paired iPhone, then pair the new iPhone.

4. Automatic reconnection fails
   The adapter reconnects only to the most recently paired iPhone. Make sure Wi-Fi and Bluetooth remain enabled on that iPhone.

5. No sound during calls
   On the iPhone call screen, select CarPlay as the audio output device. Some vehicles also require you to choose the CarPlay source in the head-unit menu.

6. Audio or navigation delays
   Streaming music and navigation rely on your iPhone's cellular data. Poor network reception can cause delays.

7. Connection drops unexpectedly
   A loose USB/data-cable connection can interrupt power. Re-seat the cable at both ends or use a different cable.

8. CarPlay won't start / USB not recognized / device incompatible
   - Unplug the adapter, restart the infotainment system, and plug the adapter in again.
   - If the problem persists, try a new USB/data cable.
