K6 Wi-Fi Home Surveillance Camera with Night-Vision

Download and Install the APP

Use the browser, scan the QR code to download and install it; or search " Linklemo" in the Apple Store / Google Play / mobile app store and install it.

APP: Linklemo

APP Connection

1. Open the APP, register and log in;
2. Open the mobile phone settings to connect to 2.4G WiFi (wireless fidelity) and turn on the mobile phone Bluetooth;
3. Click "Add Device" in APP to automatically scan devices until the device is scanned (FIG. 1), click "Bind Now" corresponding device and click "Next" (FIG. 2). After adding the successful blue indicator lights on, you can customize the device name (FIG. 3), which means successful addition.

| FIG 1. | FIG 2. | FIG 3. |

If the device cannot be added for a long time, you need to press the button long enough for 5 seconds to enter the distribution network mode again.

4. AP mode [no network connection]: press the switch button for 2　seconds, then press the reset button for 5 seconds until the blue indicator flashes; find and connect the wifi before "LLM _" with the password 12345678; Open the APP to use it.

NOTE: 1. When using the wireless connection mode, you need to maintain the WiFi connection；2. When you return to the APP, select Cancel when prompting the networking popup.

Matters Needing Attention

1. Ensure that Bluetooth is turned on and the WiFi network environment is good. The device does not support 5G WiFi;
2. Try not to stick to the metal door above the installation;
3. You must set permissions through the APP to normally use the product;
4. Ensure that the power supply is sufficient and the power supply is connected;
5. After installation, please tear off the lens protective film before use.
