- Output: 1400mA, 1.2V for 4 batteries; 9V for 2 batteries
- Charging current for single solt: 350mA, 1.2V for 4 batteries; 9V for 2 batteries
- Capacity of rechargeable batteries: unrestricted
- Dimensions: 70mm x 105mm x 29mm

Functions

Connect the charger with the outlet plug and the display will light up. When you put the rechargeable batteries, their capacity will be shown on the display. Once the battery is charged, the charger will go into trickle mode and the LCD will show that the battery is fully charged.

The charger can charge four 1.2V AA/AAA batteries or two 9V batteries at the same time. When placing the batteries, please mind the orientation of the + and - poles. The charging indicator will light red when charging. Also, it's normal that the battery is slightly warm during the charging process.
